

Modernize Legacy Systems

Transform products, increase efficiency and optimize operations!

In a cloud-first, mobile-first and AI-driven world, legacy applications are most likely holding back the transformation of business initiatives. The cost of expanding functionality or befitting with new technologies is too expensive.

Modernizing legacy web applications and migrating them into Azure in an entirely new shape creates enterprise-wide agility and provides a great opportunity to scale with new advancements and achieve targeted business outcomes.

Engage the Experts Look for the Highest Value Change

Our experts provide modernization-strategy consultancy to evaluate and determine the need to revamp, replace or retire enterprise systems and build a roadmap for the future.

The move continues with rebuilding and migrating applications into Azure, integrating upgrades of related infrastructure, data and configurations and gaining the benefit of DevOps continuous integration and deployment methodologies.

Lead an Efficient Transition Modernization Approach & Implementation

We provide an intelligent evaluation and modernization of legacy apps leveraging the power of Azure in terms of platform, infrastructure, architecture, hosting, business and technical functionalities. We ensure that pillars of interpretability, integration, security, scalability, high performance and data-driven intelligence are built in our modernization engagements.

Refactor

Recraft existing application by applying new technologies and new architecture that adapt to new digital trends.

Re-Platform

Convert existing applications to a modernized platform based on cloud native development to reduce on-premises implementation risks, increase simplicity in workload management capabilities and integrate with AI, BI and process automation features.

Secure

Implement centralized security policies and apply them to networks, firewalls for seamless connectivity between solution components utilizing cloud services as per need.

Comply

Adhere to modern solution development, deployment and integration methodologies using DevOps capabilities and deploy as Containers, PaaS or IaaS.

Change Management

Establish change management needed for an efficient and effective cloud transformation.

Why Link Development

We are a Microsoft Global SI (System Integrator) Partner, Certified CSP (Cloud Service Provider), with 17 Gold and Silver Microsoft competencies such as Gold Cloud Platform, Gold Cloud Productivity with advanced specializations in Windows Server and SQL Server Migration to Microsoft Azure and Modernization of Web Applications to Microsoft Azure.
